SUMMARY

Senior Backend Developer (3.5+ years) specializing in Java, Spring Boot, and Microservices architecture. Expertise in Redis, PostgreSQL, AWS, Kafka, and AI/ML-driven backend solutions. Proven experience building scalable, high-volume distributed systems with strong experience with multi-threaded environment and Design Patterns.

SKILLS

Languages: Java, Python, C++

Frameworks: Spring Boot, Microservices, Drools Engine, Hibernate, JPA

Databases: MySQL, PostgreSQL, Amazon DynamoDB (NoSQL)

Cloud & Caching: AWS, Redis

AI/ML & Data processing: Scikit-learn, stats models, SciPy, NumPy, pandas, Flask (REST APIs)

WORK EXPERIENCE

Senior Software Engineer
Infosys Ltd

Oct'22 — Present
Nagpur, India

IIMS (Infosys Infrastructure Management Solution)

- Improved high-traffic ticket processing in ServiceNow, handling **10K+ alerts/day** during peak windows through event-driven integration and asynchronous workflows.
- Integrated Redis caching, reducing ticket lookup latency by **50% during surge traffic**.
- Built and enhanced scalable microservices using Java and Spring Boot to support alert ingestion, ticket creation, and status synchronization.
- Designed orchestration workflows to manage end-to-end alert-to-ticket lifecycle, including validation, enrichment, prioritization, and automated routing.

Root Cause Analysis & Alert Prediction System (Cloud Infrastructure Monitoring Platform)

- Designed and developed a predictive monitoring engine to analyze cloud infrastructure alerts and identify potential root causes in real time.
- Trained machine learning models on historical alert to identify failure patterns and recurring infrastructure issues.
- Built classification and anomaly detection models using Scikit-learn, achieving **92–95% prediction accuracy** with improved precision.
- Automated troubleshooting workflows reducing service requests by **45%**.

Geospatial Location mapping (Infy Me - Infosys Internal Platform)

- Optimized the geospatial location mapping for Infosys India employees using PostgreSQL with PostGIS extension.
- Managed employee location data using latitude and longitude coordinates with spatial indexing for efficient querying.
- Implemented spatial queries (e.g., radius search, proximity detection, geo-fencing) using PostGIS functions such as ST_DWithin and ST_Distance.
- Supported geospatial mapping for **250,000+ Infosys India employees**.

EDUCATION

B.E in Computer Science, Jhulelal Institute of Technology | 9.1 CGPA

2018 — 2022

Personal Projects

Uber Backend Simulation

- Built real-time matching APIs for trips, integrated driver-passenger communication modules, and booking history endpoints.
- Implemented booking lifecycle management including ride requests, driver allocation, trip status updates, and ride history tracking.
- Integrated Amazon DynamoDB for high-speed, serverless storage of trip and session data.
